

Shropshire CCG Stoma Policy

Prescribing Guidelines and Formulary

Introduction

The aim of this document is to provide guidance regarding the issue of prescriptions to stoma patients in order to ensure cost-effective stoma provision across Shropshire CCG.

PrescQIPP guidance states that:

"Our overall aim in prescribing stoma appliances is to provide the best products for each individual patient to avoid sore skin and prevent other problems developing with a stoma. Stoma patients will be supplied with products that are necessary and appropriate. National NHS guidance states that some products should not be routinely recommended: these include deodorants, skin washes, bag covers and underwear. These products will not be supplied unless agreed as being essential by your stoma nurse."

The overall aims of Shropshire CCG are to:

1. Improve the community stoma care service by ensuring that each person is using appropriate products and not experiencing problems.
2. Reduce over-ordering and over-prescribing with a subsequent reduction of waste and cost savings.
3. Provide a source of reference and support to GPs, pharmacists, medicine management teams and administration staff regarding product choice and quantities.
4. Reduce confusion by improving the prescription management process with the use of a formulary to guide product selection.
5. Improve accuracy on digital record systems such as EPS.
6. Reduce hospital admissions by resolving issues in the community.
7. Reduce the number of GP appointments and home visits for stoma related issues.
8. Promote multi-disciplinary team working, resulting in a better patient experience.

Guidelines for GP Practices

1. Use the formulary to assess whether patients are ordering appropriate products.
2. Ensure that a patient receives a stoma nurse review if they present with a stoma related problem or if they request an increased quantity of products.
3. Ensure that patients who are part of the POD project order products from their practice; they can continue to receive their prescriptions from their Dispensing Appliance Contractor (DAC).
4. Retrospective prescribing is not supported by Shropshire CCG.
5. Ensure the DAC is informed of product changes/reductions.
6. Only issue prescriptions if requested by the patient/carer and not by the DAC. Arrange a review if new products are requested.
7. If a patient requests identical products within 2 weeks of ordering a prescription refer to a stoma care nurse for a review.
8. Encourage patients to order monthly.
9. Pouch selection needs to address patient need; sometimes an off-formulary product is more suitable and cost-effective.

Shropshire CCG does not routinely commission the following for patients with stomas:

- Deodorisers as carbon filters within pouches are designed to mask odour.
- Skin cleansers as warm water cleanses peristomal skin effectively
- Cosmetic underwear as this is cosmetic and does not provide support for a hernia.
- Pouch covers. These are cosmetic and opaque pouches are available.
- Barrier cream. This can prevent pouches adhering to skin.
- Combinations of spray and wipes of the same product. Both not required as they perform the same task.

The following are not routinely commissioned unless under the advice and direction of a stoma nurse.

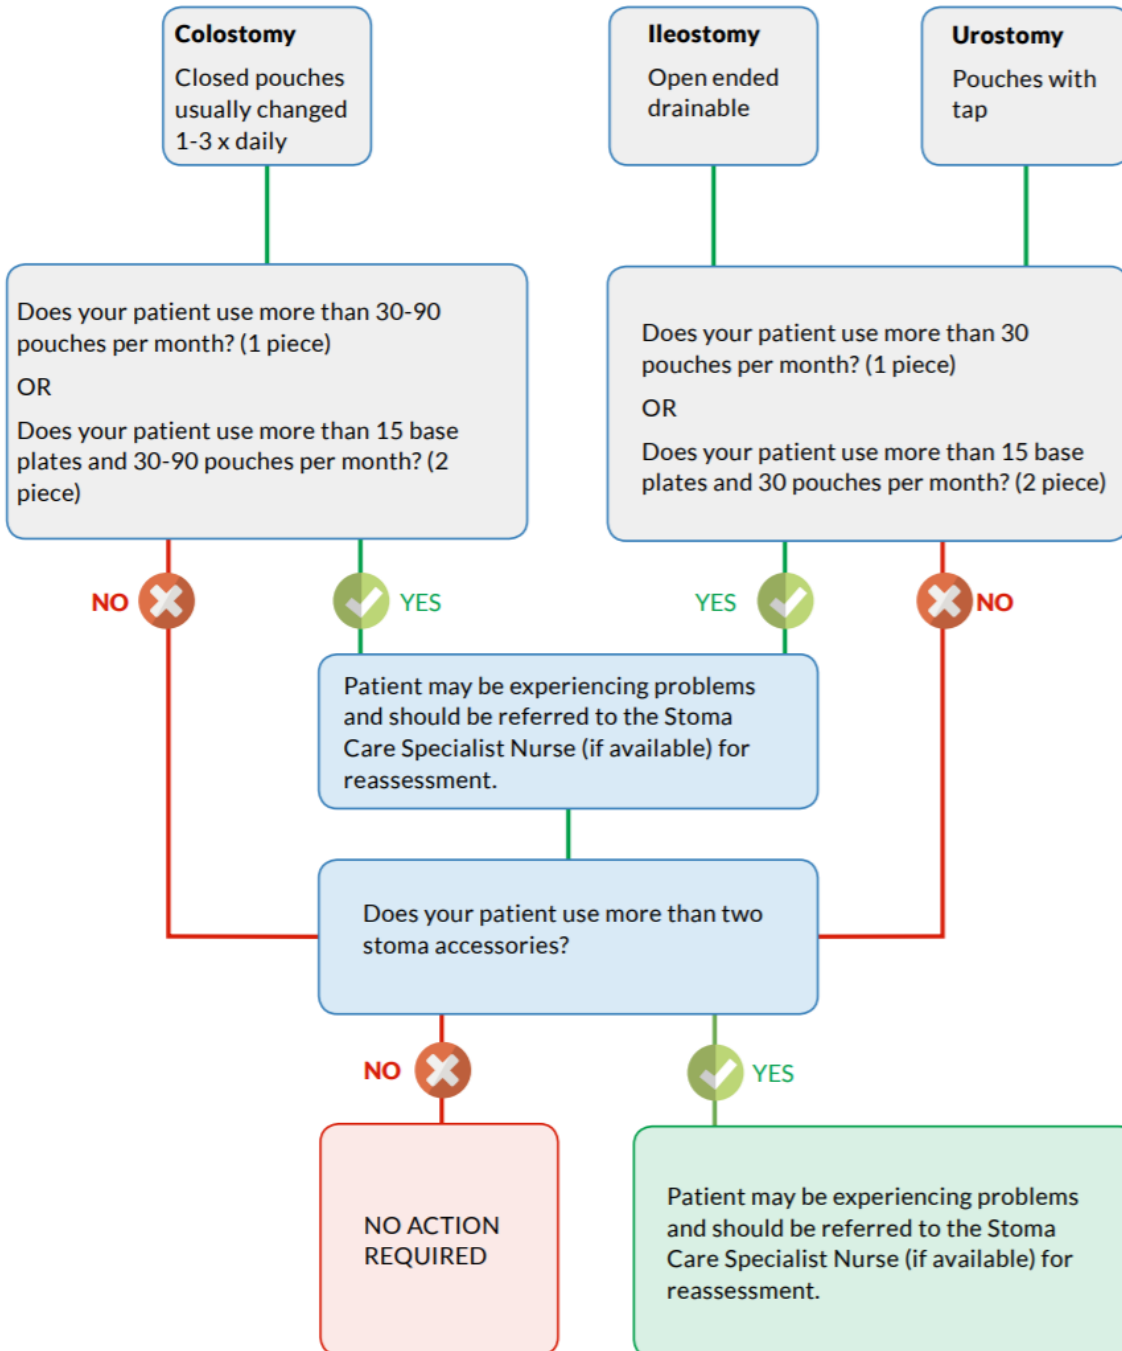

- Lubricating deodorants. Baby oil in a pipette is a cost-effective alternative
- Ring seals. May be beneficial but an alternative pouch might be a more appropriate,
- Paste and powder. May have broken skin and should be reviewed by stoma nurse.

Appropriate quantities and use for stoma items

Appliance	Quantity per Month	Prescription Directions	Normal Usage	Notes
Colostomy bags	30-90 bags	Remove and discard after use	1 – 3 per day	Not re-usable. Can be 1 or 2 piece
Ileostomy bags	10-30 bags	Drain as required. Use new bag every 1-3 days	1 every 1 to 3 days	Drainable. Can be 1 or 2 piece
Urostomy bags	20-30bags	Drain as required. Use new bag every 1-3 days	1 every 1 to 3 days	Drainable. Can be 1 or 2 piece. Require additional night bag
Night drainage bags	4 bags (1 box of 10 bags every 2-3 months)	Use a new bag every 7 days	1 per week	Drainable. Rinse as directed by stoma care nurse
Flange (for 2 piece system)	15 flanges	Change every 2-3 days	1 every 2 to 3 days	The flange is not changed at every bag change
Bag belts	3-6 per year	Usage may vary	Variable	Washable and re-useable
